**DETAILED ACTION**

**Restriction/ Elections**

- I. Claims 1-4 and 22-26 are drawn to an apparatus that contains a centralized multimedia server, classified in class 725 and subclass 91.
- II Claims 5-21 are drawn to a processor-readable medium having processor-executable instructions, classified in class 725 and subclass 55.
- III Claims 27-62 are drawn to a method for presenting a user interfaces on a multimedia presentation system, classified in class 725 and subclass 37.
- IV Claims 63 is drawn to a multimedia system which is configured to communicate to at least multimedia server, classified in class 725 and subclass 153.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of group II does not necessarily have to be in the centralized multimedia server of group I in order to facilitate reception of multimedia programs.

Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of group

III does not necessarily have to be in the centralized multimedia server of group I in order to facilitate reception of multimedia programs.

Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the multimedia presentation system does not require the particulars of the method of claim I to be fully operational. The subcombination has separate utility such as graphical depiction of relative time of that one or more bookmarked multimedia programs were bookmarked.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Inventions II and III are directed to related method. Both inventions are related as a process presenting different steps of providing bookmarks. The related inventions are distinct if the (1)

the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed providing at a point during a presentation of a multimedia program does not necessarily have the steps only of invention II. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Inventions II and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of group II does not necessarily have to be in the multimedia presentation system of group IV to generate a UI for presentation on the presentation device.

Inventions III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of group III does not necessarily have to be in the multimedia presentation system of group IV to generate a UI for presentation on the presentation device.
